

Care and maintenance instructions

EHRET window shutters

SURFACE CLEANING SET

- 1 Izi Lak cleaning agent
- 2 Restaur Lak surface polish
- 3 Protec Lak surface sealant

CLEANING THE WINDOW SHUTTERS

Cleaning recommendations

Powder-coated aluminium parts should be cleaned at least once a year and more frequently in the event of enhanced environmental effects.

Dust and dirt deposits must be removed from powder-coated aluminium parts by washing with warm water. Neutral wetting agents that do not attack aluminium can also be added (e.g. Izi Lak cleaning agent or normal washing-up liquid).

If a window shutter has not been cleaned for some time, it can give the impression that the colour has faded. In this case we recommend using **Restaur Lak surface polish**, which will return the shutter to its original colour.

To reduce dirt deposits, use the **Protec Lak surface sealant** as a preventative measure after thorough cleaning.

The suspension of the shutters (brackets and hinges) must be greased. The inside openers (crank drives) are generally maintenance-free.

Electric drives should be maintained and adjusted at regular intervals. The drive adjustment must only be carried out by trained specialist personnel.

The shutters need to be opened and closed regularly in order to ensure even weathering.

NOTES

EHRET cleaning agents for powder-coated aluminium window shutters, available from EHRET dealers.

⚠ CAUTION

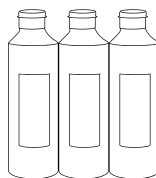

- ▶ Do not ingest!
- ▶ Keep away from children!

IMPORTANT!

Acid and alkaline cleaning agents are not suitable. The use of mechanical cleaning means with an abrasive action is not suitable either as they can damage the surface of the paint.

- ▶ Never use cleaning means which may damage the surface (e.g. abrasive powder, aggressive chemical cleaning agents, etc.).
- ▶ Use a soft sponge or cloth for cleaning.

EHRET CLEANING AGENTS

Surface cleaning set, 3×500 ml

19103 58.00 €
