## 1. Definir la posición del retenedor de contraventana fijo

- ▶ ¡Determinar la posición exacta del retenedor de contraventana (altura y distancia al borde de las hojas)!
- ▶ ¡Cuando se instalan las hojas en un marco de guías, hay que tener en cuenta la distancia al marco de las hojas!

## 2. Determinar la posición del retenedor de contraventana móvil

Vista A

- ▶ Colocar ambas hojas como en la imagen superior.
- ▶ A continuación, tomar las medidas de perforación especificadas del retenedor de contraventana fijo y pasarlas a las hojas para el retenedor de contraventana móvil.

### 3. Perforación y remachado de los retenedores de contraventana

- ▶ Enroscar el casquillo en los remaches y remachar el retenedor de contraventana móvil (como en el croquis) en la contraventana abatible.

#### Nota:

- ▶ Si la parte móvil se atasca, desplazarla con cuidado con un trozo de madera moviendo ligeramente la manija.
